

Alumni Management System

Aim

To develop an efficient and user-friendly Alumni Management System to facilitate communication and networking among former students and the institution.

Problem Statement

Maintaining and managing alumni data manually is time-consuming and prone to errors. There is a need for a centralized digital platform to manage alumni records, facilitate communication, and organize events.

Requirements

1. User registration and login
2. Admin panel for managing alumni data
3. Event creation and notification
4. Messaging system
5. Alumni search and filtering

Theory

The Alumni Management System is based on client-server architecture and uses a relational database to store user information. It implements authentication mechanisms and CRUD operations for managing data securely.

Characteristics

- Secure user authentication
- User-friendly interface
- Scalable and maintainable architecture

Alumni Management System

- Real-time notifications
- Mobile-friendly design

Functionality

The system allows alumni to register, update profiles, view and RSVP to events, communicate via messages, and connect with other alumni through a searchable directory.

Case Study

XYZ University implemented the system to connect its 10,000+ alumni. The system improved event participation by 40% and facilitated career networking among alumni.

Software Requirement Specification

- Frontend: HTML, CSS, JavaScript (React/Angular)
- Backend: Node.js / Django / PHP
- Database: MySQL / PostgreSQL
- Hosting: Cloud-based (AWS/Azure)
- Security: SSL, password hashing

Reference

1. IEEE Software Engineering Standards
2. DBMS Concepts by Korth
3. Web Development tutorials from W3Schools and MDN
4. GitHub open-source alumni systems

Alumni Management System

Conclusion

The Alumni Management System offers an effective solution for managing alumni relations, enhancing institutional networking, and building a strong community through digital connectivity.
